Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in

manner in which the invention was made.

Claims 1-5, 7 and 16, are rejected under 35 U.S.C. 103(a) as being unpatentable over

applicant's admitted prior art of figures 8 and 9 in view of Joseph [US 4,112,405] and Tabuchi et

al. [US 5,941,357].

Applicant's admitted prior art of figures 8 and 9 discloses a microwave oven, as claimed,

except for a accommodating portion for a temperature sensor disposed therewithin.

Joseph discloses a bobbin [29] for a coil [38] including a flange portion [30] having a

pocket or accommodating means [31], provided separately from a core structure, for a

temperature sensor/fuse [34], wherein the accommodating means, the temperature sensor/fuse

and the coil structure being formed as an integral unit.

It would have been obvious to one having ordinary skilled in the art at the time the

invention was made to use the temperature sensor accommodating means design of Joseph in

applicant's admitted prior art of figures 8 and 9 for the purpose of facilitating installation.

Applicant's admitted prior art in view of Joseph discloses the instant claimed invention

except for the temperature sensor being completely enclosed within the sensor accommodating

portion.

Tabuchi et al. discloses a coil device [figures 8-10] including a winding wound about a

bobbin structure having a sensor accommodating portion with a fuse [13] completely disposed

therewithin, wherein the sensor accommodating portion, the fuse and the winding structure being

formed as an integral unit.

It would have been obvious to one having ordinary skilled in the art at the time the

invention was made to completely disposed the temperature sensor in the sensor accommodating

portion of Applicant's admitted prior art in view of Joseph, as suggested by Tabuchi et al., for

the purpose of protecting the sensor from damage.

Response to Arguments

Applicant's arguments with respect to claims 1-5, 7 and 16 have been considered but are

moot in view of the new ground(s) of rejection.
